

## ACTICUT INTERNATIONAL'S EXPANSION IN INDIA

AIMIL Ltd and Acticut International are pleased to announce that a joint agreement to take Acticut International and its product portfolio into the Indian market by extending the AIMIL partnership is now in place. With the rapidly increasing business opportunities in India, we need to focus in achieving the maximum returns together with our partners.

Mr. Hector Lobo at the AIMIL New Mumbai office, who has been very instrumental in promoting Acticut International's products in India with great enthusiasm, will serve as product manager and provide support for his many colleagues throughout India. Dr. Thomas L. Lagö from Acticut International's headquarters visited AIMIL mid May and spent time with the AIMIL team and key customers. The feedback and interest was outstanding.

During Dr. Lagö's visit to India, a seminar was arranged for the cutting industry. CMTI, a high-end cutting institute, arranged the seminar with about 40 attendees. The response was extremely positive and exciting. Acticut International is focused on working with AIMIL to arrange a cooperation agreement where an expert cutting group can act as a demonstration center and expert team for our advanced and promising cutting technology.

During the visit to India, a larger manufacturer of electrical motors showed an interest in our new ROBOX™ end-of-line production testing product (see the ROBOX™ for more information). The ROBOX™ platform provides users with an easy-to-use system where a GO-NOGO testing can be performed without requiring personnel to be skilled in classification or vibration analysis. The proposed system has been demonstrated and received well. The potential for such systems is large and many companies worldwide can benefit from such a conceptual design for assuring that product quality parameters are met.
